

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (previously presented): An information display device, in which display media are sealed between a front substrate and a rear substrate, at least one of the front substrate and the rear substrate being transparent, and at least one of the front substrate and the rear substrate being flexible, and, in which the display media, to which an electrostatic field is applied, are made to move so as to display information,

wherein:

spacers are arranged on a surface of at least one of the front substrate and the rear substrate in a sealing agent arranging portion, which seals a space between the front substrate and the rear substrate by a sealing agent; and

the sealing agent arranging portion is disposed between outermost walls of partition walls for forming cells and a rib disposed on at least one of the front substrate and the rear substrate.

2. (previously presented): The information display device according to claim 1, wherein the spacers are manufactured simultaneously when the partition walls for forming cells between the front substrate and the rear substrate are arranged on at least one of the front substrate and the rear substrate.

3. (previously presented): The information display device according to claim 1, wherein a total area of the spacers on at least one of the front substrate and the rear substrate is 0.5 - 50 % of the sealing agent arranging portion on at least one of the front substrate and the rear substrate.

4. (previously presented): The information display device according to claim 1, wherein the spacers have a dotted shape.

5. (previously presented): The information display device according to claim 1, wherein the display media comprise at least one of particles and liquid powders.

6. (new): The information display device according to claim 1, wherein the plurality of spacers contact both the front substrate and the rear substrate.
